POSTDOCTORAL POSITION AVAILABLE

Bergami Lab – Postdoc in neuronal plasticity

A postdoctoral position is available starting from September 2016 in the newly established laboratory of Dr. Matteo Bergami at the CECAD Research Centre in Cologne, Germany. The position (full time, salary grade TVL-13) is open initially for 2 years to investigate mechanisms regulating the plasticity of adult hippocampal neurogenic circuits, in particular the processes underlying synaptic integration of newborn cells. We are seeking highly motivated candidates with a PhD in the fields of neuroscience, neurophysiology, cell biology or similar. **Expertise in electrophysiology, viral vectors/transgenic mouse handling and brain surgery/neuroanatomy is highly desired.** Additional expertise in imaging (e.g. in vivo/ex vivo) or stem cell biology is an advantage, but not necessary.

**Location:** Cologne is a vibrant city with a highly renowned international academic research environment. The CECAD Centre provides state-of-the-art infrastructures and is located within the University-Clinic campus, bringing together researchers and clinicians at the University of Cologne with the nearby Max Planck Institute for Biology of Ageing.

**How to apply:** Interested candidates should send a cover letter stating the relevant background, CV and two-three reference contacts by email to matteo.bergami@uk-koeln.de.
